When Disaster Strikes, Will You Be Ready?

You Hear It Said All The Time…
Be sure to backup your data, keep your virus protection current, install and maintain a firewall… but do you?
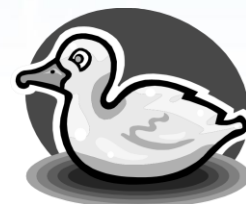

An ounce of prevention is worth a pound of cure…
You know that. Yet, disaster recovery planning often takes a backseat to the daily pressures of running a business.

If you don't have a disaster recovery plan tested and in place a simple power outage or thunderstorm can knock you offline and corrupt important data.

If you Can't Answer YES to 6 Simple Questions You May Be a Sitting Duck

1. Does your company backup data daily to both an onsite *and* offsite location?

2. Are you absolutely certain your backup copy is valid, complete and not corrupt?

3. Do you have copies of all the software licenses and discs in a safe location that can be accessed when you have to rebuild your server?

4. Can your network be accessed remotely?

5. Are important passwords stored in a secure place that company officers can access when needed?

6. Do you have an uninterruptible power supply (UPS device) to keep your network up and running during a power outage?

A disaster recovery plan doesn't have to be complicated, time-consuming or expensive.
